

System package combinations

Bob Hamil 231-753-8852 or z@bobhamil.com

These package prices include rental costs for the gear that's required and the labor to set it up and make it operational. They do not include the labor costs to run your event. If you need engineers/operators it will cost approximately \$200/300 additional per person needed.

These packages are based on six hours of time the system is on, and a couple of hours each load-in or load out. If your event is longer than this, there may be additional labor costs.

These packages are based on setting the system up in a permanent structure with adequate and conveniently located power. If your event is outdoors, there will be additional costs, and you will be responsible for providing adequate protection for the gear in the event of poor weather, including high wind.

Everything is subject to change without notice. Revised 12/9/13
